Board to Be Wild
Engineering Design Report

Maddox Riley

April 19, 2026

1 Introduction

For Born to Be Wild, the purpose of the unit was to strengthen tool path making in Aspire, woodworking skills, and Adobe Illustrator skills by designing a charcuterie board, creating tool paths for it in Aspire, and then using the table saw and CNC machine to create a full charcuterie board.

2 Initial Design and Planning

My design idea was inspired by an image on the internet (seen below), which includes half of a charcuterie board filled with black and white resin and mixed together with a small toothpick. In Adobe, my last name was added to the bottom half of the board that was not filled with resin to deep engrave it on the board.

This is the board that my design was inspired by.

Initial wood dimensions

3 Material Preparation

Explain sanding and preparation.

4 Digital Design

Describe your CAD/design process.

5 CNC and Manufacturing

Explain how the CNC machine was used.

6 Resin Process

Explain resin usage (if applicable).

7 Final Product

final_board.jpg

Final cutting board

8 Reflection

Discuss challenges, improvements, and learning.
